RAINEO® SOLUTION HELPS YOU BUILD AN UNDERGROUND SYSTEM THAT SAFELY RELEASES ALL TREATED WATER INTO THE NATURAL WATER CYCLE

- Keeps the underground waters to safe levels and prevents flooding!
- It saves on the valuable resource, by catching, redirecting, cleaning and repurposing stormwater.
- All system elements are chemical resistant and recyclable.
- By having environmentally friendly separators and waste water treatment stations in place, together with all basic elements of the system, water pollution can be reduced so any rainwater that is collected can be safely returned to the soil.

EFFECTIVE WASTEWATER TREATMENT

All our treating systems comply with national as well as international quality and safety standards and ensure water purification of 98%, which means that the **treated water can be reused for irrigation**. Wastewater treatment systems are crucial for healthy and safe environment in the household, no matter what the pollutants are - fats, grease, organic or of inorganic matter.

INFILTRATION BOXES

Stormbox collects all the rainwater caught from the roof of the buildings or the parking area and releases it in a controlled rate, avoiding flooding and overcharging of the public sewage system.

This way it keeps the groundwaters on safe levels and protects our homes!

RAIN GULLY

The upgraded rain-gully, coming now as a ready-to-install product, completes the rainwater management solution. Easy height adjustment and custom welded outlets are made easily and according to the project requirements.

PIPELIFE OFFERS A FULL RANGE OF DRAINAGE AND WASTEWATER SOLUTIONS TO KEEP YOUR HOME SAFE!

- Where to put all the rainwater from the roof, parking lot or other sealed areas? Fortunately, Pipelife has a full solution to redirect, catch, clean and store or drain rainwater, so your property is protected!
- Shower drains, gutter and funnels, properly installed will siphon rainwater quickly into drainage pipes, to later be used as you wish!

SYSTEM FOR PAVED ACCESS COVERS

The paved covers ensure flat surface, thus providing an alternative solution to metal grids or sizeable plastic covers. Using the **Prakto PAC** system enables you to comply with all the requirements of your project for easy accessibility to infrastructure installations without compromising on the paved surface appearance. Create the perfectly paved surface!

SMALL YARD MANHOLES

Being an essential part of the sewer system around the house, Prakto inspection manhole consists of only plastic parts, which are **durable, erosion and deformation resistant**. Prakto klap version prevents from wastewater entering back the ground floors, as well as stops smells and rodents to enter into the inhouse installations.

WATER METER CHAMBER

Pipelife Bulgaria offers a plug-and-play solution to **make the connection of soil and waste systems of a new building to the public water supply network easy and safe!** The pre-assembled metering chamber saves on time and costs and enables you to make individual decisions according to your needs!

RADOPRESS - ONE SYSTEM FOR THE DISTRIBUTION OF HYGIENIC HOT AND COLD WATER, UNDER-FLOOR, WALL OR CEILING HEATING AND COOLING

- Radiant heating systems operate efficiently by generating heat between people and surfaces, meaning the entire room is evenly heated without leaving uneven heated spots.
- By surface heating there is no dust stirred by the weak air flow generated through the convection of the radiator heating, and the air is not so “dry” either, because the air temperature being 2-3 grades lower is accompanied by a favorable (higher) relative humidity.
- Pipelife’s hydronic heating solution-Radopress, pays back the higher initial investment compared to conventional heating systems. Installation is easy and once properly installed, it requires minimal maintenance and guarantees long service life.
- 10 year guarantee covers all Radopress elements!

HEALTHY HYDRONIC SURFACE HEATING

SAFE DRINKING WATER

Safe, hygienic and secure distribution of drinking water is essential to our everyday life. Certified to national as well as international safety and quality standards, our water supply systems are a preferred choice for the safe delivery of drinking water in homes and buildings throughout Europe. Radopress is an **universal pipe system applicable in all water pressure installations**. The embedded aluminium layer makes them incredibly resilient against temperature changes, pressure stroke loading, torsion and tension.

SILENT WASTEWATER DISCHARGE

Our premium sound-insulated piping system Master 3 Plus has three-layer mineral reinforced polypropylene (PP) structure that:

- **prevent incrustation**
- **make camera inspection easier, because of the signal white inner layer**
- **guarantee excellent sound insulation**
- **ensure high impact resistance**

FLUSH&FLOW CISTERN SYSTEM

Pipelife’s Flush & Flow line of cistern systems combine functionality with great design options. Our various cisterns **can be installed in different environments**. To encourage environmental protection and water saving, we also offer an **ecological version of our flushing cistern setting the flushing water volume from 2 to 6 litres**. The smooth and reliable operation, easy installation and a minimum 25-year availability of spare parts are just some of the system’s key advantages.

TRUSTED INSTALLER PROGRAM

A home is a place of comfort, retreat and safety. Homeowners are not just looking for a solution but also for a comprehensive service that will offer the best advice and know-how.

That is the reason why we chose to extend our service. **Pipelife Bulgaria's trusted plumbing partners are familiar with the products, so that the installation process is fast and efficient**, without any errors or fallbacks, completely complying with regulations.

However, the benefits for you do not end here! **If you opt for our solutions and trust our installers, you can advantage of a 10-year warranty on your plumbing and heating installation!**

FREE CONSULTANCY AND TECHNICAL SUPPORT

Buildings host a complex network of mostly hidden, yet vital piping systems that service our needs and provide comfortable, hygienic and safe environments for us to work and live in. As leading international pipe experts, **we are on hand to consult you completely free of charge throughout your projects.**

Pipelife Bulgaria offers **free planning guidance and expert support through all stages of underfloor, wall and ceiling heating or cooling projects.**

We are there for you, regarding also **technical support for storm and wastewater management solutions** needed in the household! We provide the expertise and solutions to keep our world as clean as possible.

10 YEAR GUARANTEE!

A 10 year guarantee covers a number of products, no matter if you are part of the Trusted installer program or not.

Certified to national as well as international safety and quality standards, our water supply systems are a preferred choice for the safe delivery of drinking water in homes and buildings throughout Europe.
